LanSync

Intelligent Robotics Platform

One workspace. Every robot.

- Live Robot Status
- Mission & Task Management
- Fleet Coordination
- Device Control & Feedback
- Alerts & Recovery
- Dynamic Island Ready
- Desktop & Mobile Layouts
- Editable UI Components

LanSync · Intelligent Robot Coordination
White base / Cyan accent / Native editable layers

Problem Insights

Identify uncertainty in device status, robot matching, and command acknowledgement.

12%

Form Validation Failed

Simulated: 12 / 100 attempts. Review field errors and required inputs; this is not a measured user rate.

Synthetic funnel · Not interview data

9.1%

Resource Check Failed

Simulated: 8 / 88 valid attempts. Check robot availability, capability, and battery constraints.

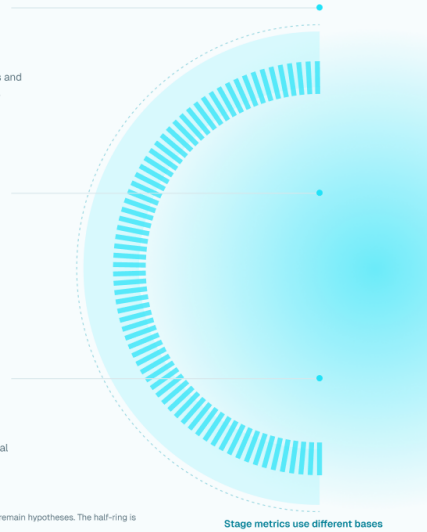

Synthetic funnel · Not interview data

7.5%

Dispatch Unconfirmed

Simulated: 6 / 80 submissions. Check the original request before retrying to avoid duplicate tasks.

Synthetic funnel · Not interview data

Stage metrics use different bases

01
Stale Status
Old data may be mistaken for live status.

02
Unclear Matching
The robot selection lacks a clear reason.

03
Unknown Receipt
Submission does not mean execution.

04
Missing Recovery
Alerts lack ownership and next steps.

All figures are synthetic, not research findings. Pain points remain hypotheses. The half-ring is decorative; the three rates are not additive.

OUR RESEARCH PROCESS

From insight to validated design.

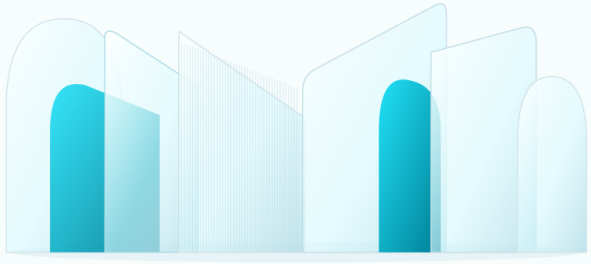

A traceable research process built around key decisions in robot operations.

01
Discover
Study users and workflows. Plan 8 user interviews.
User research / Planned

02
Define
Review competitor workflows. Frame problem hypotheses.
Desk research / Completed

03
Design
Design actions and feedback. Build a reviewable prototype.
Interaction design / Created

04
Validate
Test completion and clarity. Iterate with user evidence.
User testing / Planned

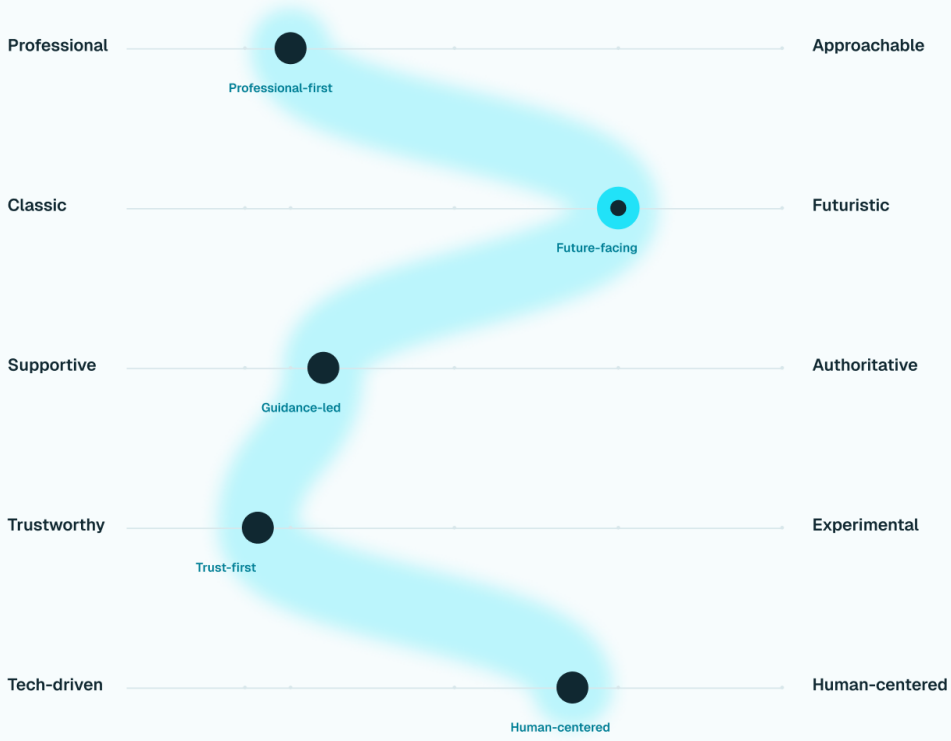

Transparent. Traceable. Continuously validated.

Design Positioning

Make robot operations clearer through a professional, trustworthy design.

Proposed Positioning for LanSync

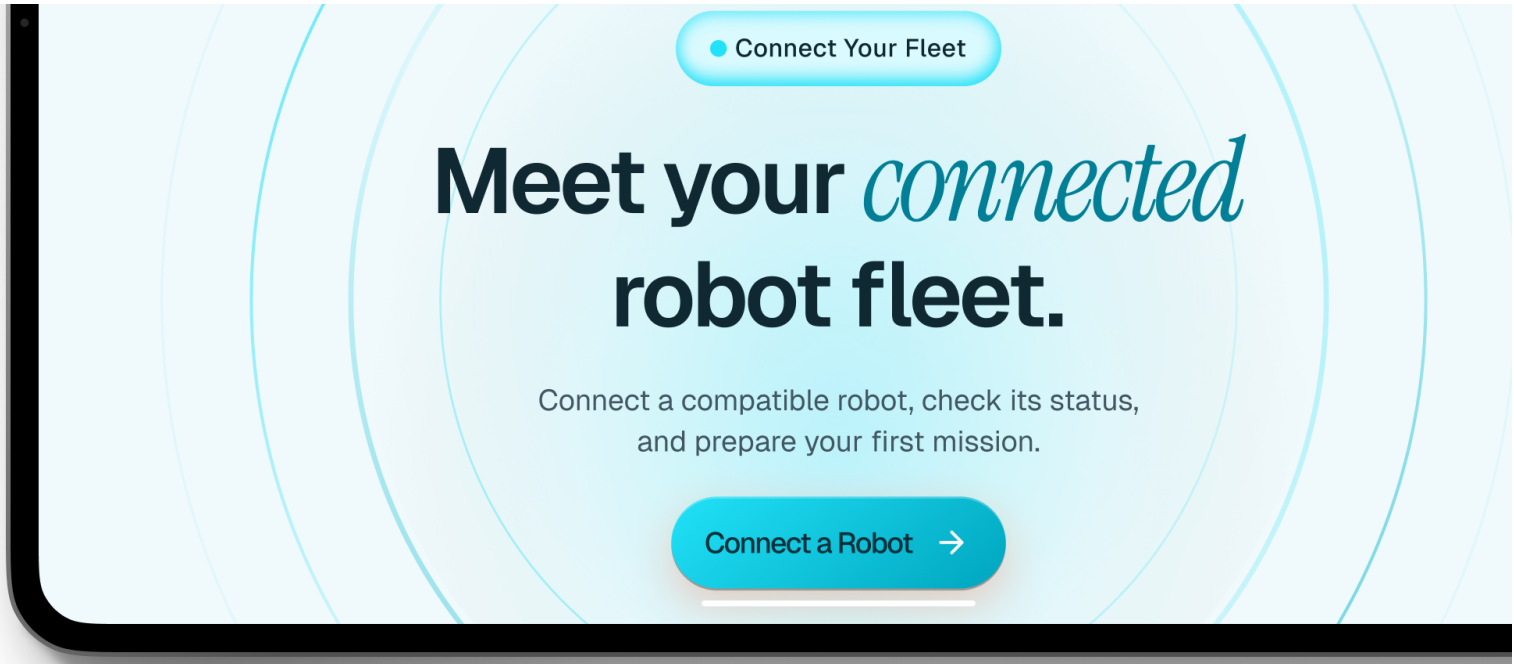

These axes express design intent—not survey scores, user statistics, or competitor rankings.

Why This Positioning?

Device control and task recovery need trust, traceability, and clear status. A technology-led visual language is paired with plain explanations and explicit next steps.

Sign In Connect Robot

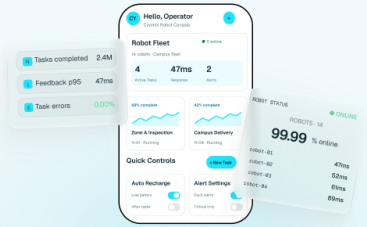

Intelligent Robotics Platform

Robotics, *connected* for a world of intelligent robots.

Cryonix connects your robots, tasks, and devices in one workspace.
Monitor every mission and keep your fleet moving.

Robot Controls

Robot skills *connected* in one fleet.

Monitor robot status, assign tasks, control devices, and review feedback. Keep every robot and operator working from the same live view.

Built for Robot Teams

Status and safety *at a glance.*

Review fleet availability, command response, access controls, and active devices. Example values illustrate how robot status is presented.

Availability	Response	Access	Fleet
99.99%	47 ms	RBAC · LOG	14 /bots
Robot connection availability across the selected monitoring period.	Time from command submission to robot acknowledgement.	Role controls and command logs for traceable robot operations.	Connected robots in this example fleet. Open a device to inspect its status.

Fleet Services

One console *One robot* fleet

Manage robot operations with one service plan.
Review device access, support, and fleet tools.

Mission Scheduler
Create inspection, delivery, and patrol missions. Set priorities, assign available robots, and pause or resume tasks as operating conditions change.

Robot Assignment
Match tasks to available robots using device capability, battery level, and location. Review assignments before sending a mission to the fleet.

Control Workspace
Use clear controls to select a device, send a command, and confirm its response. Keep connection state and operating mode visible during control.

Device Connection
Check device connectivity before issuing commands. Surface offline robots, show reconnection feedback, and help operators recover interrupted sessions.

Interaction Feedback
Distinguish commands sent, accepted, running, and completed. Show progress and clear results so operators know what each robot is doing.

Alerts & Recovery
Report low battery, blocked paths, and lost connections with clear next steps. Pause affected tasks and guide operators through checks before resuming.

Fleet Service

Fleet Plan
For teams coordinating connected robots.

¥ 69 /month, example plan

Illustrative plan. Confirm service terms before activation.

Service cycle

Monthly Annual -10% 2 yrs -30%

- Task tracking & device controls — Review task queues, device state, and command feedback.
- Priority alerts & status history — Inspect warning details and review recent device events.
- Robot operations support — Get help with device setup, task recovery, and fleet access.

Set up your fleet

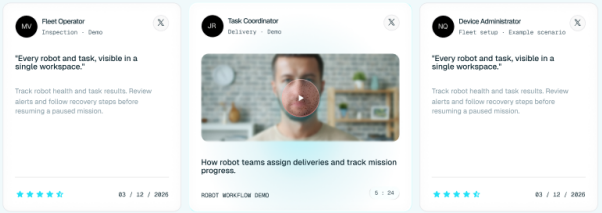

Connect your robot team with Cryonix

Plan and usage values shown are illustrative.

Robot Use Cases

Built for connected robot teams *everywhere.*

Discuss your fleet

Operator Help

Common questions, *clearly* explained.

What can I manage with Cryonix?
Cryonix brings robot status, task queues, device commands, and alerts into one workspace. Check a robot before assigning work, follow mission progress, and review command feedback. Resolve reported issues before resuming an interrupted task.

- How do I connect a robot?
- How do I pause or resume a task?
- What should I do if a robot goes offline?
- How are low-battery alerts handled?

Dynamic Island · White & Cyan

手机样机 + 可编辑界面 + 安全区说明 + 紧凑与展开任务状态

01 / 刘海 → 灵动岛

顶部改为独立胶囊，四周保留屏幕背景；状态栏时间与图标避开胶囊，正文从系统安全区下方开始。三个适配界面均为可编辑原生图层；展示 PNG 单独提供。

02 / 393 × 852 适配基准

本稿以顶部 59pt、底部 34pt 作为画板排布基准；这是当前设计基准，不是所有机型统一数值。实际布局读取系统 safe-area insets，支持字体缩放。

03 / 实时任务展示

紧凑态只呈现任务标识与进度；长按进入展开态，展示设备、任务与进度。点击进入应用内任务详情；危险控制不放在灵动岛中。展开态属于系统层，不重排应用正文。

04 / 状态与验证

数据过期时显示更新时间并标记状态待确认；任务结束及时结束实时活动。尺寸、可见性与动画由系统和机型决定；本稿为概念适配，需真机验证。
